-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE _____ MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Kroll '806. Kroll discloses an implantable medical device (column 4, lines 64-66) comprising a pulse generator 70 for delivering pacing pulses, at least one electrode (at least "20") in electrical communication with the pulse generator for delivering pacing pulses to cardiac tissue (column 6, lines 23-38) and a microprocessor 60 for controlling the pulse generator, receiving sensed data and increasing the safety factor when an increase in pacing threshold is detected (as seen in figure 2A, 308). Further, Kroll discloses the medical device having means for monitoring the indicators of likely increase in pacing, means for increasing safety factor, means for restoring the safety factor as well as indicators of increased threshold including lead impedance and arrhythmia (column 11, 45-column 13, line 20).

Art Unit: 3766

In reference to method claims 1-10, in view of the structure disclosed by Kroll, the method of operating the device would be inherent since it is the normal and logical means by which the device could be used.
